SUMMARY

Motivated Computer Science student at Superior University with a strong foundation in programming, web development, database management, and applied AI/NLP. Experienced in building practical software solutions across multiple domains, from full-stack web applications and management systems to an AI-powered resume screening platform. Actively seeking internship and entry-level opportunities to apply technical skills in real-world environments.

EXPERIENCE

AI Engineer Intern — Acclivousbyte July 31, 2026 – October 07, 2026

- **Phase 1 — Backend Development:** Built backend systems using Python, Poetry, FastAPI, SQLModel, and Neon (PostgreSQL) for structured, scalable API development.
- **Phase 2 — Applied Generative AI:** Built a multi-source RAG chatbot (PDF, web, and YouTube ingestion with ChromaDB) and a 6-agent CrewAI system for automated resume-vs-job analysis and interview preparation.
- **Phase 3 — Full-Stack & DevOps:** Built a React (Vite) frontend with dynamic UI, upload forms, chat interface, and auth management; implemented Authentication & Authorization, integrated Pinecone vector database, and containerized services using Docker.

SKILLS

Languages:	Python, C++, JavaScript, SQL
Web & Frameworks:	HTML/CSS, Bootstrap 5, PHP, Flask, FastAPI, React, Node.js
AI / NLP:	scikit-learn, Prompt Engineering, Gemini API, Google GenAI, RAG, ChromaDB, Pinecone, LangChain, AI Agents, CrewAI
Database:	SQLite, MySQL, Neon (PostgreSQL), SQLModel, Flask-SQLAlchemy (ORM), Pinecone Vector DB
DevOps & Security:	Docker, Authentication & Authorization, Git, GitHub
Tools & Platforms:	VS Code, Google Colab, Poetry, Arduino, Cisco Packet Tracer, VirtualBox, MS Office

PROJECTS

Smart Resume Screener & Job Portal Flask · scikit-learn · SQLite · Bootstrap 5
Full-stack job portal with three role-based modules — Admin, Employer, and Applicant. Employers post jobs, applicants upload resumes, and an NLP engine (TF-IDF vectorization + cosine similarity) automatically scores each resume against the job description to generate a match percentage. Built using Flask, Flask-Login, Flask-SQLAlchemy, and pdfplumber, following an MVC and Blueprint architecture pattern.

Full-Stack RAG Platform FastAPI · React (Vite) · Pinecone · Docker · Google GenAI
End-to-end Retrieval-Augmented Generation platform for real-time Q&A over PDFs and web URLs, with a React (Vite) frontend for dynamic UI, upload forms, and chat interface. Integrated Pinecone with namespace-isolated vector search, implemented Authentication & Authorization for multi-tenant data isolation, containerized services with Docker, and resolved API rate-limiting (429 errors) via optimized chunking and batch-delay strategies.

RAG Web Search Assistant Streamlit · ChromaDB · Gemini API · Serper API
Multi-source Retrieval-Augmented Generation chatbot built with Streamlit and ChromaDB. Ingests and processes PDFs, web pages, and YouTube transcripts into a vector knowledge base, then answers user questions with grounded, source-cited responses — optionally augmented with live web search results via the Serper API.

Resume Enhancement System & Interview Prep CrewAI · Streamlit · LangChain · PyPDF2
Multi-agent Streamlit application using a 6-agent CrewAI pipeline to compare a candidate's resume against a job posting, identify missing skills, and generate personalized interview preparation material — HR, DSA, and technical questions — compiled into a downloadable PDF improvement plan.

Library Management System C++ · OOP · DSA
Built twice — first using OOP principles, then enhanced with Data Structures & Algorithms for efficient search, sorting, and record management.

Automated Smart House Arduino · Hardware + Software
Multi-function automated house system integrating hardware (Arduino) with software for home automation and control — a Digital Logic Design project.

CERTIFICATIONS

Introduction to SQL
Sololearn · Dec 2025

Python Programming
MindLuster · Jun 2025

HTML, CSS, JS & Bootstrap
MindLuster · Jul 2025

AI in Modern Encryption & Cybersecurity
IEEE Superior University

EDUCATION

BS Computer Science — Superior University, Lahore
2024 – 2028 · 6th Semester · CGPA: 3.64

COURSEWORK

Data Structures & Algorithms · OOP · Database Systems · Web Development · Computer Networks · Theory of Languages · Digital Logic Design · Probability & Statistics · Artificial Intelligence (AI) · DevOps · Technopreneurship · Mobile Application Development · Design & Analysis of Algorithms · Information Security
